BRAND ELEMENTS

IA Collaborative

ia-logo

Black on white or IA's light greys only; on IA blue, black or a photo use ia-logo-white.

IA Collaborative

ia-logo-white

Use only on IA blue, black or a dark photo where the white reads at 4.5:1 or better.

IA

ia-monogram

Use where the full lockup does not fit, or beside text that already says IA...

IA

ia-monogram-white

Only on IA blue, black or a dark photo.

*

ia-asterisk

One asterisk per page, slide or panel: it marks the single statement that matters.

Insight to Action

ia-insight-to-action

Over photography or film, full width of the frame, white.

DO

- Pages sit on --background white at --lay-page (1400px) with --lay-gutter (32px) sides. Sections are --sp-section (100px) of plain air apart: no coloured bands, no alternating grey stripes. Inside a section: --sp-stack-lg (40px) from heading row to content, --sp-stack-sm (24px) between items, --sp-inset-lg (24px) inside cards, --sp-region (48px) inside panels.
- A section opens with a heading row: the marked statement (recipe asterisk-heading: a typed bold * in --primary tucked --sp-optical before a --text-h2 36px medium line in --ink-heading) left and at most one blue chevron link (recipe chevron-link, e.g. See More Results) right, then the content below. One marked statement per view.
- One family, --font-sans. Ladder: --text-display 60 bold, white over photography only; --text-h1 48 bold page titles; --text-h2 36 medium statements and section heads; --text-h3 30 bold sub-sections; --text-lead 20/1.625 prose; --text-body 16 UI and list rows; --text-small 14 meta and footer; --text-micro 12 uppercase only for form labels and list numbers, in --ink-eyebrow.
- Long-form copy is --text-lead in --text-secondary on white, running the page container as IA's articles do. First person plural. Titles of pages, articles, services and decks are Title Case with no full stop; statements (the marked line, section intros, we lines, card lines) are sentence case ending in a full stop. No emoji, no eyebrow above a title. Headings stay --ink-heading black.

DON'T

- No serif type anywhere: headings, prose, captions, decks are all --font-sans. IA is one sans family. The site paints one family, Benton Sans; a serif reads as another firm.
- No left-border accent cards, quotes or callouts. IA's accent line is the hairline above a we statement; otherwise a full --border hairline. The left stripe is a generic template move; IA's only coloured rule runs on top.
- No radial gradients, glows or blurred blobs painted in CSS. IA's only soft blue fields are the two image files. The site has no CSS colour gradient; its atmosphere is photographic (chatbg, ia-blue-field-2).
- No Tailwind radial gradient utilities; same rule as no-radial-gradient. The site has no CSS colour gradient.
